Brief about the activity/event	The heart of any steel structure is their connections. It is difficult for the student to visualize the connections as most of the steel structures are covered. Even the students find it difficult to understand if they just draw a two-dimensional drawing of various connections. Steel Structures are more challenging to construct as the fabrication needs to be precise and many parts prepared in the workshop are to be assembled together to create a structure. This is precisely why in the professional practice, the BIM tools such as Revit, TEKLA etc. are used for better coordination among all the stakeholders of a steel structure project. With this in mind, the workshop is designed so that participants become

Participants will be able to model, visualize, analyze and select appropriate connections, for efficient space planning and avoid clashes which might arise if the 3-dimensional modelling is not carried out. The SDP will start with creation of grids and levels and advance step by step to a finished steel warehouse model.
<b>Remarks</b>	SDP was successful and all participants achieved desired outcomes.

Brief about the activity/event	The construction industry has grown at a very rapid pace and the designs are becoming complex. Challenging geometrical shapes are being routinely proposed in the field of architecture. These challenging forms are a blend of generative design through complex mathematical calculations. With the advent of visual programming tools such as Grasshopper, designers are relieved from the hard work of learning the syntax of programming and focus on the design. The skill of visual programming to create a parametric design can efficiently produce more than one design alternatives within fraction of second. The visual programming skill is one of the most in demand skills in the industry. Moreover, thinking, sketching and formalizing an algorithm for a parametric design leads to crystal clear understanding of proposed structure along with its phases of construction. Generating multiple design options for
